(5217)

The correct diagnosis was established during life and confirmed at autopsy. Death occurred in the 1st month of the disease. In the terminal stage the RBC count reached 9,800,000 and Hb 150%, while the platelet count dropped to 50,000 with bleeding time of 13.5 min. Blood coagulation was also impaired, the prothrombin index amounting to 6%.

1216. KOWALSKI E., CZAJA H., KOPEĆ M., ROSZKOWSKI S. and KAZIMIERCZAK J. Pracownia Biochem. Klin. i Oddz. Chorob Wewnetr. Inst. Hematol., Warszawa. "Właściwości biochemiczne i lecznicze preparatu żelaza do wstrzyknięć dożylnych wyprodukowanego w Instytucie Hematologii. The biochemical and therapeutic properties of the iron preparation for i.v. injection, produced according to Slack-Wilkinson's method POL.ARCH.MED.WEWNĘT, 1956, 26/2 (189-208) Graphs 5 Tables 3

The method of Slack and Wilkinson for obtaining saccharated iron oxide (S.I.O.) for i.v. injections is described and the chemical properties of the obtained product are examined. A non-specific adsorption of S.I.O. on all protein fractions of the plasma was found. Thirty-four patients with hypochromic anaemia were treated by i.v. administration of the preparation. In 29 cases a good haematological and general result was obtained. An average Hb-increase per 100 mg. of the i.v. administered iron amounted to 3.2%. Local and general side-effects are discussed. Out of 414 injections there were observed: 1 mild allergic reaction and 1 severe general reaction in the form of a short-lasting collapse immediately after the injection of 5 ml. of the preparation.

Institut. :
Title : Effect of Conditions of Preparation of Rye Flour
Dough on Its Acidity and on Quality of Bread
Orig. Pub. : Roczn. technol. i chem. zywn., 1957, 2, 5-19

Abstract : On comparison of the different procedures of preparation of acid rye bread the best results were obtained on multiple-phase dough processing (initial phase, partial leaven, leaven, dough). The amount of flour in the initial starter should amount to > 2.5% of the total flour. Fermentation of the successive phases of the sour dough occurred more rapidly with a less dense consistency and at a higher temperature. On accelerated processing of the dough a bread of better quality was obtained on using a dough of fluid arose. Very good results were attained on using the accelerated (Berlin) procedure of dough preparation, at 35°, with

Abstract : A flour to water ratio of 1:1, and a duration of fermentation of 3.5 hours. For a sufficiently spongy texture this procedure increases slightly the acidity of the bread. To the dough are added > 1% yeast. A temperature of 35° must be maintained in the fermentation chamber. --

A. Yemel'yanov.

TITLE : Separation of Menthol from Mint Oil
ORIG. PUB. : Przem. spozywczy, 1958, 12, No 2, 62-67

ABSTRACT : In the investigation of methods for the separation of menthol (I) from the oil of mint, containing 50-65% I, it was established that the best results were obtained from the esterification with boric acid (II) at a ratio of 1 mol II per 3 mols I and at 90° and 30 mm Hg pressure. The obtained ester was hydrolyzed in the steam distillation thus regenerating up to 70% II. The yield of I was 32%. For the enrichment of residual oil (containing

Title : The Addition of Vitamins to Refreshing Drinks

Orig Pub : Tekhn. przem. spozywca., 1956, Vol 5, No 7, 230-231

Abstract : The author establishes the feasibility of adding vitamins to soft drinks. At the present time, the practice in the Polish People's Republic is to utilize for such purposes a concentrated extract of dog rose [sic] containing 300-400 mg% vitamic C; the addition of this extract to refreshing drinks results in an increase of the vitamin C content to 8-10 mg%.

pneumatic comparators in
industry.

Niektóre zastosowania p-
neumatycznych. Mechanika
19. 11-12. 1954, pp. 178-182. 28 (46).
A discussion over the different
pneumatic comparators used
in industry. The author divides them into
length measuring instruments and quantity instruments.
With the pressure instrument
by a spring manometer, it is the
dimensions, the size of air flow
is measured by a rotameter is the
indicating value. The main applications
of pneumatic comparators for check-
ing outer and inner dimensions
for simultaneously checking
several dimensions of an object are
described in brief. A list of advantages
of pneumatic comparators is also included.
